## **Exercise 1 GitHub**

## by Kateryna Kononikhina 77610

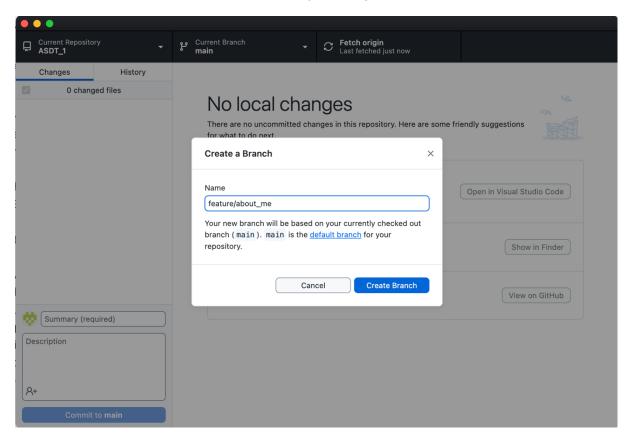

1. I already had an account in gidhub, so I just went to my page

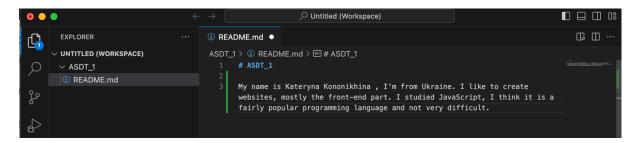

2. Created a private repository called ASDT\_1.

Create a new A repository contains a elsewhere? Import a re	Ill project files, including the revision history. Already have a project repository
Required fields are ma	rked with an asterisk (*).
Repository template  No template   Start your repository with	a template repository's contents.
Owner *	Repository name *  / ASDT_1  ASDT_1 is available.
Great repository name  Description (optional)	s are short and memorable. Need inspiration? How about urban-octo-sniffle?
	internet can see this repository. You choose who can commit.
You choose wi	•
Add a README file This is where you can Add .gitignore	write a long description for your project. <u>Learn more about READMEs</u> ,
.gitignore template: No	ie v

3. Created a new branch in the repository called feature/about\_me.

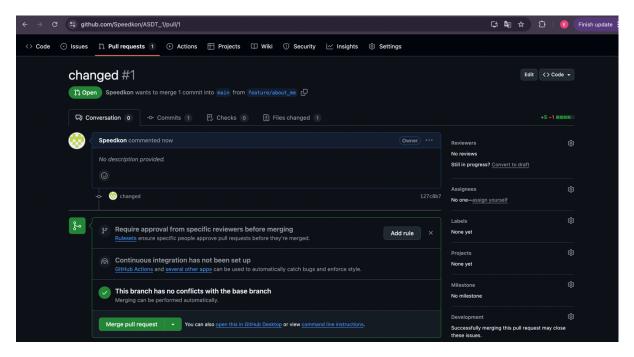

4. I added some information about myself to the README.md file.

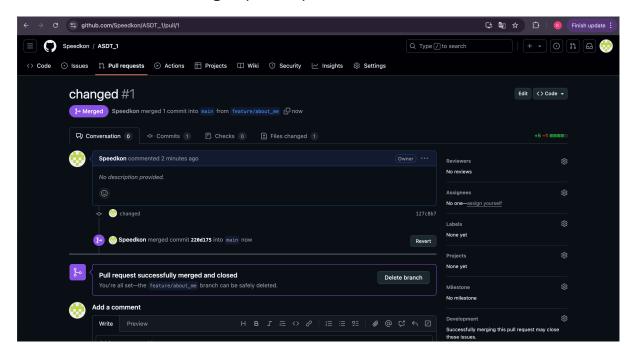

5. Then I formatted this text.

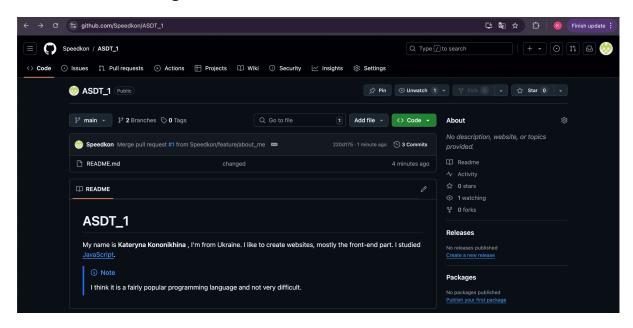

6. Committed and sent the changes to the repository, then I created a pull request for the *main* branch.

7. Reviewed and merged pull request.

8. This is what I got in the end.

9. And then I invited you)
